Klivia Handbook — the complete guide

The one document to open when you (or a customer) have a doubt. Live app: <https://klivia.vercel.app> · Contact:
WhatsApp +91 62384 56205 · taveperz@gmail.com

1. What is Klivia?

Klivia is clinic management, made calm: patients, appointments, consultations, prescriptions, pharmacy stock, printable forms and reports — one quiet system for Indian dental and general clinics. It runs in the browser (nothing to install) and can be added to a phone's home screen like a real app.

2. Who does what (roles)

Role	What they see & do
Admin	Runs the clinic: staff, settings, forms, reports, billing, inventory. The person who registers the clinic becomes its Admin.
Doctor	Their day: their appointments, waiting patients, consultations, prescriptions. Can view inventory and patient records.
Receptionist	The front desk: register patients, book appointments, check-in, manage inventory stock.

Roles **combine** — a doctor who owns the clinic is Admin + Doctor. An investor-owner who doesn't treat patients is Admin only (they won't appear in the booking list).

3. Getting started (one-time, ~10 minutes)

1. **Register** — your name, email, password (with confirm), then your clinic's name. You're the Admin. Free 14-day trial, no card.
2. **Take the tour** — it points at every menu. Replay any time from the profile menu (top-right avatar) → *Replay the tour*.
3. **Settings** — fill your clinic's **name, phone and address**. These print on every prescription and intake form (your letterhead). Skipping this means blank letterheads!
4. **Forms** — pick your default intake template (💖 dental or 🧑‍⚕️ general) and press *Preview PDF* to see it.
5. **Staff** — invite your doctors and receptionists by email. They pick their own password from the emailed link.

6. **Register your first patient** and book a visit. That's the whole loop.

4. Menu-by-menu guide

Dashboard

Your day at a glance. Doctors see *their* queue; admins see the whole clinic plus a 30-day pulse (new patients, completed visits, cancellations, completion rate) and per-doctor performance bars. The **Waiting room** number updates as reception checks patients in.

Patients

- **Register:** name + phone is enough (other fields are optional). The patient gets an automatic clinic number like **P-000123**.
- **Search** by name or phone — instant.
- **Click any patient** (or the *View* → button) to open their full record: profile card, contact details, medical-condition chips, and the **visit timeline** (every diagnosis, vitals and prescription, newest first).
- **Edit** fixes typos any time.
- **Intake form, two ways:**
 -  **Print** (dental or general button — ★ marks your clinic default): a pre-filled, letterhead PDF. The *patient* ticks the medical checklist and signs the consent in the waiting room; the *doctor* fills the clinical sections during the exam.
 -  **Fill digitally:** staff ask the patient and tick/type the answers on screen. Answers save to the record and the printed form comes out **pre-filled** (ticked boxes, typed text). Use whichever suits the patient — both produce the same premium printout.

Appointments

- **Book:** search the patient, pick the doctor, date (branded calendar) and time.
- **Check in** when the patient arrives — the doctor instantly sees them and gets a 🛎 notification.
- Statuses flow: *Scheduled* → *Waiting* → *In progress* → *Completed* (or *Cancelled*).
- **Consult** (doctor): diagnosis, treatment notes, vitals (BP/pulse/temp/weight), and the prescription:
 - medicine names **auto-suggest from your own inventory**
 - one-tap dose chips **1-0-0 / 1-0-1 / 1-1-1 / 0-0-1** and timing chips (*after food, before food, at bedtime, with warm water*)
 - Save & complete → a **designer PDF prescription** to print or share.

Invoices (patient billing)

- **New invoice:** pick the patient, add items (description × qty × rate — totals compute live), optional discount and note.
- **"Payment collected now"** with UPI/Cash/Card/Bank chips — create and collect in one step; the **letterhead receipt PDF opens automatically**, ready to print.
- Or leave it **Unpaid** and mark it paid later (the ▼ menu picks the method).
- Per-clinic numbers like **INV-000042**; paid invoices can't be cancelled (record a correction instead).
- The money strip on top shows **collected today, this month, and the unpaid backlog** — the owner's daily glance.

Inventory (*Clinic plan and above*)

- Track **medicines, consumables and equipment:** unit, price, stock count, reorder level, expiry date.

- **Low stock rises to the top** with a red chip; expiring items (60 days) get flagged — the top of this list is your daily purchase list.
- **± Stock** for deliveries and dispensing — counts can never go below zero.
- On the Solo plan this page shows what it does and how to unlock it.

Forms

The intake form's home:

- **Two templates** —  dental /  general — with **Preview PDF** (renders the real form with sample data) and **Set as default**.
- **Custom sections (form builder)**: Admin adds their own sections that print on the form — three shapes: **writing box**, **labelled lines** (e.g. Policy number / Company / Valid till) and **checklist** (e.g. Smoking / Pan chewing / Alcohol). Reorder with ↑↓. Each section applies to both templates or just one.
- Doctors/reception can view and preview; only Admin designs.

Reports (Admin)

Patients over time, busiest days, status mix, per-doctor booked-vs-completed. **Download PDF** for records or partners.

Staff (Admin)

- **Invite by email** (they set their own password via a 7-day link) or set a **temporary password** in person — both work.
- **Visiting doctors**: if their email already has a Klivia account at another clinic, your clinic simply attaches to it — one login, both clinics, and their password is never touched.
- **Resend invite** for lost emails.

Billing (Admin)

Current plan, trial state, staff/doctor usage vs limits, and plan cards to upgrade. Hitting a limit anywhere in the app shows an upgrade prompt.

Settings (Admin)

Your clinic's **letterhead** — name, phone, address printed on every PDF — plus a link to the Forms builder.

My clinics (Growth plan)

Click your clinic's name (top of sidebar) → switch between clinics or open a new branch; *Manage all clinics* shows the full structure as cards. Each clinic's patients, staff, stock and billing are completely separate. On Solo/Clinic plans this option shows locked (🔒) — tapping explains Growth.

Notifications

The bell collects what matters to **you**: bookings made for you, check-ins, 24-hour appointment reminders, and billing messages (payment received, plan changed).

5. On your phone

Klivia is a **PWA** — in Chrome on Android: menu → **Add to Home screen / Install app**. It opens full-screen with the Klivia icon, and the bottom tab bar (Dashboard · Patients · Appointments · Inventory · More) is built for thumbs. After app updates, one extra refresh picks up the newest version.

6. Plans — what's included where

	Solo ₹999/mo	Clinic ₹1,999/mo ★	Growth ₹3,999/mo
Doctors / staff	1 / 2	5 / 10	Unlimited
Patients, appointments, prescriptions, forms	✓	✓	✓
Patient billing & invoices	✓	✓	✓
Pharmacy & inventory	—	✓	✓
Reports & analytics	✓ *	✓	✓
Multiple clinics (branches)	—	—	✓
Yearly option	₹9,990	₹19,990	₹39,990 (2 months free)

Free 14-day trial = full Clinic-tier features. Prices may change per the Terms (30 days' notice at renewal).

7. For the platform owner (Klivia's own back office) 🗝️

Sign in with a platform-admin email (configured on the server) → **Platform** appears in the sidebar:

- Every clinic: plan, trial, staff/patient counts, **owner contact with one-tap WhatsApp / Call / Email**.
- **Click a clinic** → full details + complete payment history.
- 💰 **Record payment**: amount, method (UPI/bank/cash), months covered, the **actual payment date** (backdatable), optional plan change — coverage extends from their current paid-until date. The clinic's admins get a "Payment received 🎉" notification + email receipt automatically.
- **Paid until / Overdue** chips per clinic + a red "Payment overdue" card = your collection list.
- **Suspend** for non-payment (blocks the whole clinic's sign-in within the hour; deletes nothing) / **Re-activate** (sends "Welcome back").
- 📧 **Test production email** verifies the live mail pipeline.

8. Customer FAQ (for demos & doubts)

- **Is patient data safe?** Each clinic's data is isolated at the database core — another clinic *cannot* read your records. Passwords are stored as one-way hashes. No data selling, no ads.
- **Who owns the data?** The clinic. Export any time; leaving is allowed.
- **Can we move from paper / another software?** Start fresh in minutes; Growth includes migration help.
- **Who fills the intake form?** Either: print it (patient ticks & signs, doctor completes) or staff fill it digitally by asking — both print identically.
- **Owner isn't a doctor?** Fine — Admin manages; only Doctor-role users are bookable.
- **Do we need to install anything?** No. Browser on any device; optional home-screen install on phones.
- **Internet down?** Klivia needs a connection (recent screens may still show from cache). Clinic Wi-Fi or a phone hotspot is enough.
- **What if we stop paying?** Access pauses; data is kept and restored on payment.

9. Troubleshooting

Symptom	Fix
Email not received (invite/reset)	Check spam. Staff page → <i>Resend invite</i> . If server email is down, the owner can use a temp password instead.
Page feels stuck	The thin teal bar at the very top = still loading (free server wakes in ~30-60s on first visit of the day).
Old tab icon / old version	Hard refresh (Ctrl+Shift+R); on phone, close and reopen the installed app.
Can't open second clinic	Multi-clinic is Growth-only — the lock explains it.
Inventory shows an upgrade page	It's a Clinic-plan feature on Solo.
Forgot the tour	Profile menu → <i>Replay the tour</i> .

10. Current limitations (honest list — updated as we ship)

Not yet available	Status
Online payments for subscriptions	Manual UPI/bank/cash + owner console today; Razorpay planned
WhatsApp/SMS to patients	Reminders are in-app today; WhatsApp channel planned
Patient portal / online booking	Planned
Clinic logo upload	Planned (needs file storage)
Dental chart (odontogram), treatment plans, attachments	Planned
Malayalam / regional language	Planned
Appointment reschedule (cancel+rebook today)	Planned
Payroll & staff leave	Under consideration

11. Marketing playbook (for the Klivia founder 🧐)

Who to sell to first: single-doctor and 2–5 doctor clinics in Kerala that run on paper or WhatsApp chats. They feel the pain daily and decide fast — the doctor-owner IS the buyer.

The pitch (10 seconds):

"Your whole clinic — patients, appointments, prescriptions, pharmacy — in one clean app. From ₹999 a month, 14 days free. I'll set it up for you in 10 minutes."

The demo that sells (5 minutes, in this order):

1. Register their clinic **live with their real name** (ownership feeling)
2. Register a patient in 20 seconds → book → **Check in** → show the doctor's waiting room updating
3. Record a consult with the **1-0-1 dose chips** → **download the branded prescription PDF** — the "wow" moment
4. Open **Forms** → *Preview PDF* → "and this is YOUR intake form, with YOUR name on it — add any section you want"

5. Show Reports → "you'll finally know your busiest days"

6. Point at the price → "less than one filling per month"

Channels that work for this market:

- WhatsApp outreach (the floating button captures inbound) + send the brochure PDF (docs/marketing/Klivia-Complete-Guide.pdf)
- Visit clinics at 1–3 PM (lunch lull) with a tablet demo
- One happy dentist → ask for 2 referrals; dentists trust dentists
- Local dental association meetups in Kochi/Trivandrum

Objection answers:

- "*My data?*" → "Isolated per clinic, password-protected accounts, you can export and leave anytime."
- "*Too techy for my receptionist*" → "If she can use WhatsApp, she can use this. I'll train her in 15 minutes."
- "*Price?*" → "14 days free, then less than the cost of one patient visit per month — and pharmacy tracking alone saves more than that."
